ABOUT THE iCOUNT METHOD® AND iKNOW BY THE iCOUNT METHOD®

After years of teaching both students and fellow educators, Shoshie Cweiber embarked on a quest to revolutionize math education for both students and teachers alike. Drawing upon her extensive experience, thorough research, and relentless refinement, The iCount Method® came to fruition in 2010.

Initially, The iCount Method® was comprised of a series of workshops designed to equip teachers with the skills to effectively teach math using a clear and straightforward format. Upon the request of principals and teachers alike, comprehensive textbooks were developed to facilitate the implementation of The iCount Method® in classrooms nationwide.

The iCount Method® is distinguished by its innovative approach to cultivating students' deep understanding of procedural fluency. Instead of relying on rote memorization, the method emphasizes comprehension-based strategies that elucidate the "how" and "why" of mathematics at all levels, from fundamental to advanced concepts. This pedagogical approach progresses seamlessly from the tangible to the abstract, incorporating real-world scenarios, manipulatives, storytelling, logic, and elements of fun to engage students and facilitate their comprehension of complex mathematical concepts within the core curriculum.

To ensure ongoing success, a new program, iKnow by The iCount Method®, has been introduced. Tailored for schools facing time constraints or seeking a streamlined curriculum, this series guarantees positive outcomes for students.

In 2023, a specialized math series titled How to Make Money and Keep It™ was developed for high school students. This practical resource equips students with essential math skills required beyond graduation, such as managing bank accounts, investing, dining out, and purchasing a car.

Today, The iCount Method® is used in over 200 schools across the United States, where educators embrace the pleasure of teaching, parents enjoy reviewing, and, most importantly, students develop a genuine love for learning math.

ABOUT SHOSHIE CWEIBER, MS SP ED

CREATOR AND PUBLISHER OF THE ICOUNT METHOD®
AND IKNOW BY THE ICOUNT METHOD®

The success of The iCount Method® and iKnow by The iCount Method® is rooted in years of dedicated experience and relentless effort. Shoshie Cweiber bears over two decades of experience as a mathematics specialist and educator, during which she has authored an impressive array of more than 125 iCount Method® math books. Her extensive background encompasses diverse educational endeavors, ranging from instructing students and educators in various academic and specialized settings to conducting workshops, training sessions, and crafting professional development resources for both teachers and principals.

In her role as a professor at Daemen College, Shoshie Cweiber remains committed to cultivating the next generation of educators while continuously refining and innovating The iCount Method® and iKnow by The iCount Method®. This unwavering dedication ensures that both programs remain at the forefront of excellence in mathematics education, constantly striving to enhance the teaching and learning experience for all.

Dear Valued Educator,

It is with great pleasure that **The iCount Method®** introduces our extensive range of math resources, including textbooks, workbooks, fluency books, posters, USBs, and other invaluable learning tools. Each of these resources has a proven track record of establishing a robust foundation in mathematics for students, carrying them through their elementary education with confidence.

At the heart of **The iCount Method®** is a commitment to nurturing strong number sense—a fundamental understanding of how to reason with numbers and effectively navigate mathematical concepts. Our approach to each math lesson is multi-faceted, including but not limited to:

Number Sense Activity

Equips students with the skills to utilize and comprehend numbers effectively

Math Fluency Activity

Provides strategies for accurate and efficient problem-solving

Make Every Math Lesson Count!

Offers detailed guidance on teaching the day's lesson, ensuring that math becomes tangible and relevant for all students.

Monitor Progress

Our evaluation sheets allow educators to track students' progress individually and in comparison to their peers.

Many of the resources featured in this pamphlet are all-inclusive **comprehensive grade curriculums** that offer a complete toolkit for educators. By investing in **The iCount Method®**, you can rest assured that your students will acquire the essential math concepts needed for their current grade and beyond.

We invite you to explore the diverse range of options and packages available, including math books, teaching workbooks, and supplementary books and worksheets. Our team is here to assist you in selecting the best-suited packages for your students' unique needs. Please don't hesitate to reach out to us to start this important conversation.

iKnow

by *The iCount Method*[®]

Nothing succeeds like success. The success of The iCount Method[®] lies in our keen understanding of the needs of both educators and students, coupled with our forward-thinking approach to anticipate future demands and growth potential.

This foresight led to the inception of iKnow by The iCount Method[®], a groundbreaking program that addresses the evolving educational landscape. Recognizing a gap within the diverse levels of The iCount Method[®], Mrs. Cweiber identified an opportunity for further triumph—a program tailored to meet the needs of students who benefit from a more concise format.

We invite you to explore our latest series, characterized by vibrant colors, larger fonts, and captivating graphics that empower students to confidently proclaim, "I Count!" and "I Know!"

Presenting the iKnow by iCount Method[®] series: a testament to our ongoing commitment to educational excellence.

LETTERS OF RECOMMENDATION

I am a third grade teacher in Monsey. I would like to let you know how much I appreciate your math program. We were using another program but when you published your new third grade workbook, we of course ordered it. Until this new school year, I can't begin to tell you what a hard time I had coming up with a clear and concrete Math practice for my students. I used to spend half of the lesson just explaining the directions to them. The iCount Method changed everything. Everything seems much clearer to my students. It's actually the first year that my students understand what to do in the book without any help. I especially love the fact that there's a Word Problem lesson at the end of each chapter.

Thanks for giving me the opportunity to help my students grow in Math.

Dear Mrs. Cweiber,

It has been an absolute pleasure to work with you in building the critical foundations of Mathematics using your remarkable I-Count curriculum and methodology. Our school mission includes the desire to help each and every student reach her fullest potential, in a warm, nurturing and supportive environment. We strive to provide our students with, or lead them toward, the resources or support they may need when necessary, so that every girl can succeed. You, Mrs. Cweiber, have proven to be a most worthy and competent partner in these efforts!

Throughout the past two years, I have been most impressed with the quality, creativity, sheer talent and professionalism which is apparent in every aspect of the iCount Math curriculum. Math instruction, especially in the early elementary school years, is so critical, and needs to be done properly, in order to establish the foundational Math skills which students will always continue to build upon. Clearly, a tremendous amount of effort and research has been expended in creating a superb and masterful curriculum, which is beautifully organized, has visual appeal and is easy to use. I am extremely satisfied with The iCount Math and I look forward to continue utilizing your services as we work together to meet the needs of our students.

Sincerely,
General Studies Principal

My teacher is moving through the first grade red book and is absolutely loving it!!!!!! The iCount Method is helping all our students, on every level, succeed in math!! It is a pleasure to use!!

General Studies
Principal

Feel free to reach out! We will happily provide you with the contact information of the teachers, principals, and curriculum directors who authored these letters of recommendation.
